THIS IS UNEVALUATED INFORMATION

50X1-HUM

- a. Unspecified projects are underway on the Island of Ada, which is located at the mouth of the Bojana River. Civilians are prohibited to approach the island, and the livestock which grazed on the island has been transported to the mainland.
- b. In the fall of 1949 two underground installations were completed at the Maurijan height. The installations consist of two large bunkers disguised as houses. They are approximately twenty meters long and only a short distance apart. The first bunker is reported to contain a signal station, and the other an observation station. There are approximately thirty sailors stationed permanently on Maurijan under the command of a lieutenant. It is not known whether there is a radio station here, but the operation of a heliograph has been noted, and at night two search lights with a ten kilometer range have been observed. A new automobile road has been built to the Maurijan height. The road is not noticeable from the coast because it is located on the opposite slope of the hill. On the slopes of the Maurijan height facing the sea, several concrete battery emplacements have been built.
- c. Several large bunkers for coastal artillery were built during the summer of 1950 on the heights of Komin. Bunkers, underground depots, and shelters are under construction along the Kominski Bay, and every approach is strictly forbidden.
- d. A large military project named Guardpost No. 1 is being constructed on Meterica, above the town of Ulcinj. The project was begun in the early part of 1949. The building is approximately forty meters long and twenty meters wide, and it has a basement approximately two and a half to three meters in depth constructed of fortified cement and containing many underground passages and cells. The civilian workers who were employed in the ground work were replaced by a military workers' battalion. Civilians are forbidden approach. The building is guarded at night by three guards and during the day by two guards.
